

INDUSTRIAL AUTOMATION ENGINEERING · EST. 2020 · BENGALURU, INDIA

Precision Automation Engineering for Manufacturers Worldwide

We design, program, and commission control systems for printing, packaging, film, and converting machinery — from single control panels to full line modernizations — engineered by a certified team in Bengaluru and delivered to customers across 35+ countries.

01 Why Global Manufacturers Choose Control Standards

Certified Engineering Depth

Siemens Solution Partner and Beckhoff Certified System Integrator — real controls engineering in TIA Portal, TwinCAT, SCADA and motion control, not generic scripting.

End-to-End Ownership

Concept, panel design, programming, commissioning and lifecycle support under one accountable engineering team — never handed off between vendors.

Proven, Measurable ROI

15–40% efficiency gains, documented project by project with before/after metrics — not marketing estimates.

Industry 4.0-Ready

IIoT, digital twins, predictive maintenance and OEE analytics built into every modernization, so your line is ready for what's next.

02 What We Deliver

PLC & SCADA Programming

Siemens S7-1200/1500, TIA Portal, Beckhoff TwinCAT, WinCC — architecture, logic and HMI built for your process, not templated.

Control Panel Design & Fabrication

Concept-to-certified-build panel manufacturing with full documentation and compliance.

Motion Control & Drive Systems

Servo motion, VFDs and multi-axis synchronization for tension control, registration and coordinated line control.

Machine Modernization & Retrofits

Legacy PLC replacement, drive upgrades and HMI overhauls that extend machine life without a capital rebuild.

Industry 4.0 & Digital Solutions

IIoT connectivity, digital twins, predictive maintenance, SCADA/MES/ERP integration and OEE dashboards.

Lifecycle Management & Support

Remote diagnostics, proactive spares planning and rapid on-site response for the life of the system.

CERTIFIED & PARTNERED WITH

SIEMENS BECKHOFF SCHNEIDER ELECTRIC MITSUBISHI

03 Control Standards vs. Traditional System Integrators

Most automation projects fail on ownership, not technology. Here is what changes when Control Standards is your engineering partner.

CAPABILITY	TYPICAL SYSTEM INTEGRATOR	CONTROL STANDARDS
Engineering Ownership	— Work split across multiple subcontractors	✓ One accountable engineering team, start to finish
Platform Expertise	— Generalist, limited OEM certification	✓ Siemens Solution Partner + Beckhoff Certified System Integrator
Support Model	— Reactive, break-fix ticketing	✓ Lifecycle management — remote diagnostics + proactive spares planning
Modernization Approach	— Like-for-like replacement only	✓ Industry 4.0-ready upgrades — IIoT, predictive maintenance, analytics
Global Reach	— Region-locked delivery capability	✓ 500+ projects across 35+ countries from one engineering hub
ROI Visibility	— Estimated, rarely tracked post go-live	✓ Measured and reported — 15–40% documented efficiency gains

04 Proven Results, Not Promises

FILM LINE

High-Speed Slitter Upgrade

Closed-loop tension control and automated knife positioning replaced manual adjustment on a high-speed slitting line.

+30% LINE SPEED

-45% REJECTIONS

PRINTING

Legacy Controller Migration

Migrated a 12-station gravure press to Siemens S7-1500 with secure remote diagnostics and job recipe storage.

-40% FAULT-FINDING

+18% UPTIME

COATING

Multi-Zone Motion Sync

Multi-axis synchronization and closed-loop tension control across 8 zones eliminated web breaks and material waste.

-60% WEB BREAKS

+22% MATERIAL YIELD

05 Global Customer Engagement

One Bengaluru-based engineering team — trusted by customers across 35+ countries including Germany, USA, UK, UAE, Singapore, South Africa, and Southeast Asia.

Ready to Modernize Your Line?

Request a technical consultation — our engineering team responds directly, no account managers in between.
